THE COMPLETE

DIGITAL MARKETING PLAYBOOK

Strategy / SEO / Social Media / Advertising / Analytics / AI

An expanded dark-edition learning and implementation workbook with 30 chapters, real-world frameworks, planning templates and practical exercises.

2026 EDITION

Published by Datta Sable | dattasable.com

How to use this book

Start with the business objective

Read the foundation chapters first. Define who you serve, the action you want them to take, and what success means before selecting a platform.

Learn by doing

Each topic page includes a method, a worked scenario, measurable indicators, an execution checklist, and a short assignment. Apply the assignment to a real or practice business.

Treat examples as illustrations

Sample conversion rates, budgets and outcomes are educational examples, not market benchmarks or guaranteed results. Always verify current platform features and policies.

Respect privacy and consent

Use permission-based email marketing, comply with applicable privacy and advertising laws, and avoid deceptive targeting or unsupported performance claims.

Keep a single source of truth

Maintain a campaign brief, content calendar, UTM naming guide, event measurement plan, and weekly reporting sheet. Revisit the 90-day roadmap at the end.

Goals and value proposition

01 Why this matters

Goals and value proposition connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on goals and value proposition as part of digital marketing fundamentals.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to goals and value proposition. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to goals and value proposition, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For goals and value proposition, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Channel roles and customer journeys

01 Why this matters

Channel roles and customer journeys connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on channel roles and customer journeys as part of digital marketing fundamentals.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to channel roles and customer journeys. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to channel roles and customer journeys, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For channel roles and customer journeys, explicitly note the assumption that could invalidate the decision.

Funnel stages and intent

01 Why this matters

Funnel stages and intent connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on funnel stages and intent as part of digital marketing fundamentals.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to funnel stages and intent. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to funnel stages and intent, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For funnel stages and intent, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Owned, earned and paid media

01 Why this matters

Owned, earned and paid media connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on owned, earned and paid media as part of digital marketing fundamentals.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to owned, earned and paid media. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to owned, earned and paid media, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For owned, earned and paid media, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Campaign operating rhythm

01 Why this matters

Campaign operating rhythm connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on campaign operating rhythm as part of digital marketing fundamentals.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to campaign operating rhythm. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to campaign operating rhythm, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For campaign operating rhythm, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Industry landscape mapping

01 Why this matters

Industry landscape mapping connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on industry landscape mapping as part of market research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to industry landscape mapping. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to industry landscape mapping, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For industry landscape mapping, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Competitor audits

01 Why this matters

Competitor audits connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on competitor audits as part of market research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to competitor audits. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to competitor audits, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For competitor audits, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for competitor audits: write a 100-word diagnosis, list three

Search and conversation research

01 Why this matters

Search and conversation research connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on search and conversation research as part of market research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to search and conversation research. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to search and conversation research, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For search and conversation research, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Demand and seasonality

01 Why this matters

Demand and seasonality connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on demand and seasonality as part of market research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to demand and seasonality. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to demand and seasonality, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For demand and seasonality, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Research synthesis

01 Why this matters

Research synthesis connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on research synthesis as part of market research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to research synthesis. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to research synthesis, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For research synthesis, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for research synthesis: write a 100-word diagnosis, list three

Demographic and behavioral segments

01 Why this matters

Demographic and behavioral segments connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on demographic and behavioral segments as part of audience segmentation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to demographic and behavioral segments. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to demographic and behavioral segments, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For demographic and behavioral segments, explicitly note the assumption that could invalidate the decision.

Jobs-to-be-done interviews

01 Why this matters

Jobs-to-be-done interviews connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on jobs-to-be-done interviews as part of audience segmentation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to jobs-to-be-done interviews. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to jobs-to-be-done interviews, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For jobs-to-be-done interviews, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Persona evidence

01 Why this matters

Persona evidence connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on persona evidence as part of audience segmentation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to persona evidence. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to persona evidence, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For persona evidence, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for persona evidence: write a 100-word diagnosis, list three

Customer objections

01 Why this matters

Customer objections connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on customer objections as part of audience segmentation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to customer objections. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to customer objections, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For customer objections, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for customer objections: write a 100-word diagnosis, list three

Segment prioritization

01 Why this matters

Segment prioritization connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on segment prioritization as part of audience segmentation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to segment prioritization. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to segment prioritization, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For segment prioritization, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Brand promise and differentiation

01 Why this matters

Brand promise and differentiation connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on brand promise and differentiation as part of brand strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to brand promise and differentiation. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to brand promise and differentiation, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For brand promise and differentiation, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Positioning statements

01 Why this matters

Positioning statements connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on positioning statements as part of brand strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to positioning statements. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to positioning statements, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For positioning statements, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Tone and messaging

01 Why this matters

Tone and messaging connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on tone and messaging as part of brand strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to tone and messaging. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to tone and messaging, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For tone and messaging, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for tone and messaging: write a 100-word diagnosis, list three

Visual consistency

01 Why this matters

Visual consistency connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on visual consistency as part of brand strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to visual consistency. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to visual consistency, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For visual consistency, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for visual consistency: write a 100-word diagnosis, list three

Brand trust signals

01 Why this matters

Brand trust signals connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on brand trust signals as part of brand strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to brand trust signals. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to brand trust signals, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For brand trust signals, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for brand trust signals: write a 100-word diagnosis, list three

SMART objectives

01 Why this matters

SMART objectives connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on SMART objectives as part of marketing planning.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to SMART objectives. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to SMART objectives, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For SMART objectives, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for SMART objectives: write a 100-word diagnosis, list three

Channel selection

01 Why this matters

Channel selection connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on channel selection as part of marketing planning.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to channel selection. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to channel selection, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For channel selection, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for channel selection: write a 100-word diagnosis, list three

Resource allocation

01 Why this matters

Resource allocation connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on resource allocation as part of marketing planning.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to resource allocation. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to resource allocation, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For resource allocation, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for resource allocation: write a 100-word diagnosis, list three

Marketing calendars

01 Why this matters

Marketing calendars connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on marketing calendars as part of marketing planning.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to marketing calendars. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to marketing calendars, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For marketing calendars, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for marketing calendars: write a 100-word diagnosis, list three

Risk and assumptions

01 Why this matters

Risk and assumptions connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on risk and assumptions as part of marketing planning.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to risk and assumptions. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to risk and assumptions, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For risk and assumptions, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for risk and assumptions: write a 100-word diagnosis, list three

Information architecture

01 Why this matters

Information architecture connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on information architecture as part of website foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to information architecture. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to information architecture, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For information architecture, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Landing page hierarchy

01 Why this matters

Landing page hierarchy connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on landing page hierarchy as part of website foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to landing page hierarchy. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to landing page hierarchy, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For landing page hierarchy, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Mobile accessibility

01 Why this matters

Mobile accessibility connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on mobile accessibility as part of website foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to mobile accessibility. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to mobile accessibility, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For mobile accessibility, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for mobile accessibility: write a 100-word diagnosis, list three

Page speed fundamentals

01 Why this matters

Page speed fundamentals connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on page speed fundamentals as part of website foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to page speed fundamentals. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to page speed fundamentals, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For page speed fundamentals, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Forms and trust

01 Why this matters

Forms and trust connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on forms and trust as part of website foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to forms and trust. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to forms and trust, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For forms and trust, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for forms and trust: write a 100-word diagnosis, list three

Headline frameworks

01 Why this matters

Headline frameworks connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on headline frameworks as part of conversion copywriting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to headline frameworks. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to headline frameworks, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For headline frameworks, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for headline frameworks: write a 100-word diagnosis, list three

Benefit-led descriptions

01 Why this matters

Benefit-led descriptions connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on benefit-led descriptions as part of conversion copywriting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to benefit-led descriptions. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to benefit-led descriptions, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For benefit-led descriptions, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Calls to action

01 Why this matters

Calls to action connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on calls to action as part of conversion copywriting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to calls to action. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to calls to action, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For calls to action, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for calls to action: write a 100-word diagnosis, list three

Objection handling

01 Why this matters

Objection handling connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on objection handling as part of conversion copywriting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to objection handling. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to objection handling, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For objection handling, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for objection handling: write a 100-word diagnosis, list three

Editing and clarity

01 Why this matters

Editing and clarity connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on editing and clarity as part of conversion copywriting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to editing and clarity. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to editing and clarity, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For editing and clarity, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for editing and clarity: write a 100-word diagnosis, list three

Crawlability and indexation

01 Why this matters

Crawlability and indexation connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on crawlability and indexation as part of technical seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to crawlability and indexation. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to crawlability and indexation, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For crawlability and indexation, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Site architecture and canonicals

01 Why this matters

Site architecture and canonicals connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on site architecture and canonicals as part of technical seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to site architecture and canonicals. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to site architecture and canonicals, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For site architecture and canonicals, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Structured data

01 Why this matters

Structured data connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on structured data as part of technical seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to structured data. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to structured data, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For structured data, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for structured data: write a 100-word diagnosis, list three

Performance and mobile

01 Why this matters

Performance and mobile connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on performance and mobile as part of technical seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to performance and mobile. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to performance and mobile, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For performance and mobile, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Technical SEO audits

01 Why this matters

Technical SEO audits connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on technical SEO audits as part of technical seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to technical SEO audits. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to technical SEO audits, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For technical SEO audits, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for technical SEO audits: write a 100-word diagnosis, list three

Search intent classification

01 Why this matters

Search intent classification connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on search intent classification as part of keyword research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to search intent classification. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to search intent classification, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For search intent classification, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Topic clusters

01 Why this matters

Topic clusters connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on topic clusters as part of keyword research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to topic clusters. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to topic clusters, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For topic clusters, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for topic clusters: write a 100-word diagnosis, list three

Keyword prioritization

01 Why this matters

Keyword prioritization connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on keyword prioritization as part of keyword research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to keyword prioritization. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to keyword prioritization, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For keyword prioritization, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

SERP analysis

01 Why this matters

SERP analysis connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on SERP analysis as part of keyword research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to SERP analysis. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to SERP analysis, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For SERP analysis, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for SERP analysis: write a 100-word diagnosis, list three

Keyword-to-page mapping

01 Why this matters

Keyword-to-page mapping connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on keyword-to-page mapping as part of keyword research.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to keyword-to-page mapping. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to keyword-to-page mapping, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For keyword-to-page mapping, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Titles and descriptions

01 Why this matters

Titles and descriptions connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on titles and descriptions as part of on-page seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to titles and descriptions. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to titles and descriptions, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For titles and descriptions, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Heading hierarchy

01 Why this matters

Heading hierarchy connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on heading hierarchy as part of on-page seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to heading hierarchy. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to heading hierarchy, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For heading hierarchy, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for heading hierarchy: write a 100-word diagnosis, list three

Internal linking

01 Why this matters

Internal linking connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on internal linking as part of on-page seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to internal linking. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to internal linking, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For internal linking, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for internal linking: write a 100-word diagnosis, list three

Image optimization

01 Why this matters

Image optimization connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on image optimization as part of on-page seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to image optimization. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to image optimization, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For image optimization, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for image optimization: write a 100-word diagnosis, list three

Content refreshes

01 Why this matters

Content refreshes connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content refreshes as part of on-page seo.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content refreshes. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content refreshes, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content refreshes, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content refreshes: write a 100-word diagnosis, list three

Editorial positioning

01 Why this matters

Editorial positioning connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on editorial positioning as part of content strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to editorial positioning. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to editorial positioning, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For editorial positioning, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for editorial positioning: write a 100-word diagnosis, list three

Pillar and cluster planning

01 Why this matters

Pillar and cluster planning connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on pillar and cluster planning as part of content strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to pillar and cluster planning. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to pillar and cluster planning, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For pillar and cluster planning, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Content briefs

01 Why this matters

Content briefs connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content briefs as part of content strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content briefs. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content briefs, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content briefs, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content briefs: write a 100-word diagnosis, list three

Distribution workflows

01 Why this matters

Distribution workflows connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on distribution workflows as part of content strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to distribution workflows. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to distribution workflows, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For distribution workflows, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Content governance

01 Why this matters

Content governance connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content governance as part of content strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content governance. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content governance, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content governance, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content governance: write a 100-word diagnosis, list three

Research and outlines

01 Why this matters

Research and outlines connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on research and outlines as part of blog and long-form content.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to research and outlines. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to research and outlines, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For research and outlines, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Expertise and originality

01 Why this matters

Expertise and originality connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on expertise and originality as part of blog and long-form content.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to expertise and originality. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to expertise and originality, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For expertise and originality, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Readability and examples

01 Why this matters

Readability and examples connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on readability and examples as part of blog and long-form content.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to readability and examples. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to readability and examples, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For readability and examples, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Content maintenance

01 Why this matters

Content maintenance connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content maintenance as part of blog and long-form content.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content maintenance. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content maintenance, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content maintenance, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content maintenance: write a 100-word diagnosis, list three

Content conversion

01 Why this matters

Content conversion connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content conversion as part of blog and long-form content.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content conversion. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content conversion, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content conversion, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content conversion: write a 100-word diagnosis, list three

Platform-audience fit

01 Why this matters

Platform-audience fit connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on platform-audience fit as part of social media strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to platform-audience fit. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to platform-audience fit, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For platform-audience fit, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for platform-audience fit: write a 100-word diagnosis, list three

Content pillars

01 Why this matters

Content pillars connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content pillars as part of social media strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content pillars. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content pillars, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content pillars, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content pillars: write a 100-word diagnosis, list three

Posting cadence

01 Why this matters

Posting cadence connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on posting cadence as part of social media strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to posting cadence. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to posting cadence, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For posting cadence, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for posting cadence: write a 100-word diagnosis, list three

Community engagement

01 Why this matters

Community engagement connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on community engagement as part of social media strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to community engagement. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to community engagement, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For community engagement, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Social reporting

01 Why this matters

Social reporting connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on social reporting as part of social media strategy.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to social reporting. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to social reporting, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For social reporting, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for social reporting: write a 100-word diagnosis, list three

Profile optimization

01 Why this matters

Profile optimization connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on profile optimization as part of instagram marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to profile optimization. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to profile optimization, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For profile optimization, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for profile optimization: write a 100-word diagnosis, list three

Reels and carousels

01 Why this matters

Reels and carousels connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on reels and carousels as part of instagram marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to reels and carousels. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to reels and carousels, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For reels and carousels, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for reels and carousels: write a 100-word diagnosis, list three

Creative hooks

01 Why this matters

Creative hooks connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on creative hooks as part of instagram marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to creative hooks. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to creative hooks, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For creative hooks, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for creative hooks: write a 100-word diagnosis, list three

Community management

01 Why this matters

Community management connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on community management as part of instagram marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to community management. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to community management, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For community management, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Insights and iteration

01 Why this matters

Insights and iteration connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on insights and iteration as part of instagram marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to insights and iteration. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to insights and iteration, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For insights and iteration, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for insights and iteration: write a 100-word diagnosis, list three

Professional positioning

01 Why this matters

Professional positioning connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on professional positioning as part of linkedin marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to professional positioning. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to professional positioning, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For professional positioning, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Thought leadership posts

01 Why this matters

Thought leadership posts connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on thought leadership posts as part of linkedin marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to thought leadership posts. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to thought leadership posts, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For thought leadership posts, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for thought leadership posts: write a 100-word diagnosis, list three

Company pages

01 Why this matters

Company pages connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on company pages as part of linkedin marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to company pages. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to company pages, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For company pages, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for company pages: write a 100-word diagnosis, list three

Lead conversations

01 Why this matters

Lead conversations connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on lead conversations as part of linkedin marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to lead conversations. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to lead conversations, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For lead conversations, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for lead conversations: write a 100-word diagnosis, list three

LinkedIn analytics

01 Why this matters

LinkedIn analytics connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on LinkedIn analytics as part of linkedin marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to LinkedIn analytics. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to LinkedIn analytics, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For LinkedIn analytics, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for LinkedIn analytics: write a 100-word diagnosis, list three

Video topic research

01 Why this matters

Video topic research connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on video topic research as part of youtube and video.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to video topic research. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to video topic research, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For video topic research, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for video topic research: write a 100-word diagnosis, list three

Storyboards and scripts

01 Why this matters

Storyboards and scripts connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on storyboards and scripts as part of youtube and video.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to storyboards and scripts. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to storyboards and scripts, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For storyboards and scripts, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Titles and thumbnails

01 Why this matters

Titles and thumbnails connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on titles and thumbnails as part of youtube and video.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to titles and thumbnails. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to titles and thumbnails, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For titles and thumbnails, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for titles and thumbnails: write a 100-word diagnosis, list three

Retention analysis

01 Why this matters

Retention analysis connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on retention analysis as part of youtube and video.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to retention analysis. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to retention analysis, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For retention analysis, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for retention analysis: write a 100-word diagnosis, list three

Video repurposing

01 Why this matters

Video repurposing connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on video repurposing as part of youtube and video.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to video repurposing. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to video repurposing, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For video repurposing, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for video repurposing: write a 100-word diagnosis, list three

Campaign architecture

01 Why this matters

Campaign architecture connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on campaign architecture as part of search advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to campaign architecture. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to campaign architecture, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For campaign architecture, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Keyword match and negatives

01 Why this matters

Keyword match and negatives connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on keyword match and negatives as part of search advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to keyword match and negatives. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to keyword match and negatives, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For keyword match and negatives, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Ad copy and assets

01 Why this matters

Ad copy and assets connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on ad copy and assets as part of search advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to ad copy and assets. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to ad copy and assets, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For ad copy and assets, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for ad copy and assets: write a 100-word diagnosis, list three

Landing page alignment

01 Why this matters

Landing page alignment connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on landing page alignment as part of search advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to landing page alignment. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to landing page alignment, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For landing page alignment, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Search campaign optimization

01 Why this matters

Search campaign optimization connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on search campaign optimization as part of search advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to search campaign optimization. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to search campaign optimization, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For search campaign optimization, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Campaign objectives

01 Why this matters

Campaign objectives connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on campaign objectives as part of paid social advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to campaign objectives. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to campaign objectives, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For campaign objectives, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for campaign objectives: write a 100-word diagnosis, list three

Audience targeting

01 Why this matters

Audience targeting connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on audience targeting as part of paid social advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to audience targeting. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to audience targeting, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For audience targeting, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for audience targeting: write a 100-word diagnosis, list three

Creative testing

01 Why this matters

Creative testing connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on creative testing as part of paid social advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to creative testing. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to creative testing, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For creative testing, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for creative testing: write a 100-word diagnosis, list three

Frequency and fatigue

01 Why this matters

Frequency and fatigue connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on frequency and fatigue as part of paid social advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to frequency and fatigue. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to frequency and fatigue, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For frequency and fatigue, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Budget pacing

01 Why this matters

Budget pacing connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on budget pacing as part of paid social advertising.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to budget pacing. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to budget pacing, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For budget pacing, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for budget pacing: write a 100-word diagnosis, list three

Consent and audience eligibility

01 Why this matters

Consent and audience eligibility connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on consent and audience eligibility as part of retargeting and remarketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to consent and audience eligibility. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to consent and audience eligibility, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For consent and audience eligibility, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Sequenced messages

01 Why this matters

Sequenced messages connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on sequenced messages as part of retargeting and remarketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to sequenced messages. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to sequenced messages, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For sequenced messages, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for sequenced messages: write a 100-word diagnosis, list three

Exclusion rules

01 Why this matters

Exclusion rules connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on exclusion rules as part of retargeting and remarketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to exclusion rules. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to exclusion rules, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For exclusion rules, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for exclusion rules: write a 100-word diagnosis, list three

Measurement limitations

01 Why this matters

Measurement limitations connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on measurement limitations as part of retargeting and remarketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to measurement limitations. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to measurement limitations, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For measurement limitations, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Incrementality

01 Why this matters

Incrementality connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on incrementality as part of retargeting and remarketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to incrementality. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to incrementality, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For incrementality, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for incrementality: write a 100-word diagnosis, list three

Permission and list quality

01 Why this matters

Permission and list quality connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on permission and list quality as part of email marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to permission and list quality. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to permission and list quality, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For permission and list quality, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Welcome sequences

01 Why this matters

Welcome sequences connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on welcome sequences as part of email marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to welcome sequences. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to welcome sequences, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For welcome sequences, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for welcome sequences: write a 100-word diagnosis, list three

Newsletter planning

01 Why this matters

Newsletter planning connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on newsletter planning as part of email marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to newsletter planning. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to newsletter planning, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For newsletter planning, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for newsletter planning: write a 100-word diagnosis, list three

Deliverability basics

01 Why this matters

Deliverability basics connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on deliverability basics as part of email marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to deliverability basics. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to deliverability basics, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For deliverability basics, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for deliverability basics: write a 100-word diagnosis, list three

Email reporting

01 Why this matters

Email reporting connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on email reporting as part of email marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to email reporting. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to email reporting, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For email reporting, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for email reporting: write a 100-word diagnosis, list three

Trigger design

01 Why this matters

Trigger design connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on trigger design as part of marketing automation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to trigger design. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to trigger design, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For trigger design, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for trigger design: write a 100-word diagnosis, list three

Lead nurturing

01 Why this matters

Lead nurturing connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on lead nurturing as part of marketing automation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to lead nurturing. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to lead nurturing, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For lead nurturing, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for lead nurturing: write a 100-word diagnosis, list three

CRM handoffs

01 Why this matters

CRM handoffs connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on CRM handoffs as part of marketing automation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to CRM handoffs. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to CRM handoffs, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For CRM handoffs, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for CRM handoffs: write a 100-word diagnosis, list three

Workflow QA

01 Why this matters

Workflow QA connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on workflow QA as part of marketing automation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to workflow QA. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to workflow QA, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For workflow QA, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for workflow QA: write a 100-word diagnosis, list three improvement

Automation governance

01 Why this matters

Automation governance connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on automation governance as part of marketing automation.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to automation governance. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to automation governance, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For automation governance, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Measurement plans

01 Why this matters

Measurement plans connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on measurement plans as part of analytics foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to measurement plans. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to measurement plans, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For measurement plans, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for measurement plans: write a 100-word diagnosis, list three

Events and conversions

01 Why this matters

Events and conversions connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on events and conversions as part of analytics foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to events and conversions. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to events and conversions, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For events and conversions, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

UTM governance

01 Why this matters

UTM governance connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on UTM governance as part of analytics foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to UTM governance. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to UTM governance, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For UTM governance, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for UTM governance: write a 100-word diagnosis, list three

Dashboard interpretation

01 Why this matters

Dashboard interpretation connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on dashboard interpretation as part of analytics foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to dashboard interpretation. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to dashboard interpretation, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For dashboard interpretation, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Data quality

01 Why this matters

Data quality connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on data quality as part of analytics foundations.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to data quality. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to data quality, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For data quality, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for data quality: write a 100-word diagnosis, list three improvement

Property and stream setup

01 Why this matters

Property and stream setup connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on property and stream setup as part of google analytics 4.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to property and stream setup. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to property and stream setup, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For property and stream setup, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Key events

01 Why this matters

Key events connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on key events as part of google analytics 4.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to key events. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to key events, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For key events, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for key events: write a 100-word diagnosis, list three improvement

Acquisition reports

01 Why this matters

Acquisition reports connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on acquisition reports as part of google analytics 4.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to acquisition reports. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to acquisition reports, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For acquisition reports, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for acquisition reports: write a 100-word diagnosis, list three

Explorations

01 Why this matters

Explorations connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on explorations as part of google analytics 4.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to explorations. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to explorations, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For explorations, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for explorations: write a 100-word diagnosis, list three improvement

GA4 QA checklist

01 Why this matters

GA4 QA checklist connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on GA4 QA checklist as part of google analytics 4.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to GA4 QA checklist. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to GA4 QA checklist, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For GA4 QA checklist, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for GA4 QA checklist: write a 100-word diagnosis, list three

Research and friction analysis

01 Why this matters

Research and friction analysis connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on research and friction analysis as part of conversion optimization.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to research and friction analysis. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to research and friction analysis, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For research and friction analysis, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Hypothesis writing

01 Why this matters

Hypothesis writing connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on hypothesis writing as part of conversion optimization.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to hypothesis writing. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to hypothesis writing, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For hypothesis writing, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for hypothesis writing: write a 100-word diagnosis, list three

A/B test design

01 Why this matters

A/B test design connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on A/B test design as part of conversion optimization.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to A/B test design. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to A/B test design, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For A/B test design, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for A/B test design: write a 100-word diagnosis, list three

Sample size caveats

01 Why this matters

Sample size caveats connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on sample size caveats as part of conversion optimization.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to sample size caveats. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to sample size caveats, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For sample size caveats, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for sample size caveats: write a 100-word diagnosis, list three

Experiment decisions

01 Why this matters

Experiment decisions connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on experiment decisions as part of conversion optimization.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to experiment decisions. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to experiment decisions, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For experiment decisions, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for experiment decisions: write a 100-word diagnosis, list three

Customer acquisition cost

01 Why this matters

Customer acquisition cost connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on customer acquisition cost as part of marketing economics.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to customer acquisition cost. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to customer acquisition cost, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For customer acquisition cost, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for customer acquisition cost: write a 100-word diagnosis, list three

Lifetime value assumptions

01 Why this matters

Lifetime value assumptions connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on lifetime value assumptions as part of marketing economics.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to lifetime value assumptions. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to lifetime value assumptions, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For lifetime value assumptions, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Contribution margin

01 Why this matters

Contribution margin connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on contribution margin as part of marketing economics.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to contribution margin. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to contribution margin, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For contribution margin, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for contribution margin: write a 100-word diagnosis, list three

ROAS versus profit

01 Why this matters

ROAS versus profit connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on ROAS versus profit as part of marketing economics.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to ROAS versus profit. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to ROAS versus profit, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For ROAS versus profit, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for ROAS versus profit: write a 100-word diagnosis, list three

Forecast sensitivity

01 Why this matters

Forecast sensitivity connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on forecast sensitivity as part of marketing economics.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to forecast sensitivity. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to forecast sensitivity, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For forecast sensitivity, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for forecast sensitivity: write a 100-word diagnosis, list three

Research assistance

01 Why this matters

Research assistance connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on research assistance as part of ai for marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to research assistance. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to research assistance, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For research assistance, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for research assistance: write a 100-word diagnosis, list three

Content ideation

01 Why this matters

Content ideation connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content ideation as part of ai for marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content ideation. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content ideation, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content ideation, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for content ideation: write a 100-word diagnosis, list three

Editing and QA

01 Why this matters

Editing and QA connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on editing and QA as part of ai for marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to editing and QA. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to editing and QA, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For editing and QA, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for editing and QA: write a 100-word diagnosis, list three

Automation safeguards

01 Why this matters

Automation safeguards connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on automation safeguards as part of ai for marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to automation safeguards. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to automation safeguards, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For automation safeguards, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Human oversight

01 Why this matters

Human oversight connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on human oversight as part of ai for marketing.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to human oversight. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to human oversight, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For human oversight, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for human oversight: write a 100-word diagnosis, list three

Google Trends and Search Console

01 Why this matters

Google Trends and Search Console connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on Google Trends and Search Console as part of 15 free marketing tools.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to Google Trends and Search Console. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to Google Trends and Search Console, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For Google Trends and Search Console, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

GA4 and Looker Studio

01 Why this matters

GA4 and Looker Studio connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on GA4 and Looker Studio as part of 15 free marketing tools.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to GA4 and Looker Studio. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to GA4 and Looker Studio, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For GA4 and Looker Studio, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

PageSpeed and Lighthouse

01 Why this matters

PageSpeed and Lighthouse connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on PageSpeed and Lighthouse as part of 15 free marketing tools.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to PageSpeed and Lighthouse. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to PageSpeed and Lighthouse, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For PageSpeed and Lighthouse, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Canva and creative tools

01 Why this matters

Canva and creative tools connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on Canva and creative tools as part of 15 free marketing tools.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to Canva and creative tools. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to Canva and creative tools, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For Canva and creative tools, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for Canva and creative tools: write a 100-word diagnosis, list three

Email, SEO and productivity tools

01 Why this matters

Email, SEO and productivity tools connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on email, SEO and productivity tools as part of 15 free marketing tools.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to email, SEO and productivity tools. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to email, SEO and productivity tools, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For email, SEO and productivity tools, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Executive scorecards

01 Why this matters

Executive scorecards connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on executive scorecards as part of marketing reporting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to executive scorecards. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to executive scorecards, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For executive scorecards, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for executive scorecards: write a 100-word diagnosis, list three

Channel scorecards

01 Why this matters

Channel scorecards connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on channel scorecards as part of marketing reporting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to channel scorecards. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to channel scorecards, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For channel scorecards, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for channel scorecards: write a 100-word diagnosis, list three

Narrative insights

01 Why this matters

Narrative insights connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on narrative insights as part of marketing reporting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to narrative insights. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to narrative insights, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For narrative insights, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for narrative insights: write a 100-word diagnosis, list three

Stakeholder communication

01 Why this matters

Stakeholder communication connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on stakeholder communication as part of marketing reporting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to stakeholder communication. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to stakeholder communication, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For stakeholder communication, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Monthly review meetings

01 Why this matters

Monthly review meetings connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on monthly review meetings as part of marketing reporting.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to monthly review meetings. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to monthly review meetings, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For monthly review meetings, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Days 1-15 baseline

01 Why this matters

Days 1-15 baseline connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on days 1-15 baseline as part of 90-day execution roadmap.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to days 1-15 baseline. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to days 1-15 baseline, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For days 1-15 baseline, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for days 1-15 baseline: write a 100-word diagnosis, list three

Days 16-30 foundation

01 Why this matters

Days 16-30 foundation connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on days 16-30 foundation as part of 90-day execution roadmap.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to days 16-30 foundation. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to days 16-30 foundation, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For days 16-30 foundation, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Days 31-45 launch

01 Why this matters

Days 31-45 launch connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on days 31-45 launch as part of 90-day execution roadmap.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to days 31-45 launch. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to days 31-45 launch, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For days 31-45 launch, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for days 31-45 launch: write a 100-word diagnosis, list three

Days 46-70 optimize

01 Why this matters

Days 46-70 optimize connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on days 46-70 optimize as part of 90-day execution roadmap.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to days 46-70 optimize. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to days 46-70 optimize, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For days 46-70 optimize, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for days 46-70 optimize: write a 100-word diagnosis, list three

Days 71-90 scale

01 Why this matters

Days 71-90 scale connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on days 71-90 scale as part of 90-day execution roadmap.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to days 71-90 scale. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to days 71-90 scale, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For days 71-90 scale, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for days 71-90 scale: write a 100-word diagnosis, list three

Campaign brief template

01 Why this matters

Campaign brief template connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on campaign brief template as part of templates and operating toolkit.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to campaign brief template. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to campaign brief template, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For campaign brief template, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Content calendar template

01 Why this matters

Content calendar template connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on content calendar template as part of templates and operating toolkit.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to content calendar template. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to content calendar template, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For content calendar template, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

SEO audit checklist

01 Why this matters

SEO audit checklist connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on SEO audit checklist as part of templates and operating toolkit.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to SEO audit checklist. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to SEO audit checklist, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For SEO audit checklist, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Create a practical deliverable for SEO audit checklist: write a 100-word diagnosis, list three

Experiment log template

01 Why this matters

Experiment log template connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on experiment log template as part of templates and operating toolkit.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to experiment log template. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to experiment log template, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For experiment log template, explicitly note the assumption that could invalidate the decision.

05 Practice assignment

Weekly performance review

01 Why this matters

Weekly performance review connects a specific marketing decision to the customer experience and the business result. Rather than pursuing activity for its own sake, define the intended audience, the customer problem, the promised value and the next measurable action. Consider a small service business that wants more qualified enquiries without wasting time or budget. Its team is working on weekly performance review as part of templates and operating toolkit.

02 A repeatable method

First document the current situation and collect evidence from existing pages, customer questions, channel reports and competitor observations. Next identify one meaningful gap related to weekly performance review. Choose a focused intervention, name an owner, record a baseline and set a review date. Finally compare the result with the baseline and decide whether to keep, refine or stop the change.

03 Worked application

The business creates a one-page brief with five fields: target segment, customer need, primary message, destination page and success event. It tests one change linked to weekly performance review, such as a clearer explanation, a more relevant offer or a better-defined audience. The team checks lead quality as well as lead volume; an increase in clicks alone is not counted as success.

04 Measurement and interpretation

Track a small set of relevant indicators: eligible reach, engaged visits, meaningful actions, conversion rate and cost per qualified outcome when spending money. Conversion rate = conversions / eligible visits x 100. If 24 of 600 eligible visits convert, the rate is 4%. Compare like-for-like periods, watch for small samples, and record tracking changes before interpreting trends.

FIELD CHECKLIST

Confirm the audience and goal; save the evidence; select one priority; document the owner; verify tracking; review the outcome; record the next action. For weekly performance review, explicitly note the assumption that could invalidate the decision.

05 Practice assignment
